

Guthrie Team Members:

We are in the process of implementing an advanced anti-phishing platform that will help protect our mailboxes from real time phishing / malicious email attacks.

You will soon see the following new add-in buttons on your mailboxes. All you need to do is select the message you wish to submit and then click on the button.

Outlook for Windows

Outlook Web Portal Access:

What is Phishing?

Phishing is a form of fraud in which an attacker masquerades as a reputable entity or person in email or other communication channels. The attacker uses phishing emails to distribute malicious links or attachments that can perform a variety of functions, including the stealing of login credentials or account information from victims.

What are you expected to do?

This button will allow you to report an email that you find as suspicious directly from your email account to the IS Security team.

If you're not sure if the email you received is suspicious or safe, please report it! We will do the rest.

What happens when you report an email?

Our security team will review your report and will classify it, we will be using special tools and resources to make the determination if it's a bad email.

You will get an email notification regarding your report's status.

Your awareness and cooperation are very important.

Let's protect Guthrie together!
